

IBM Watson™ IoT Platform DataIngest

This project describes steps to configure **DataIngest Connector** container. The container is configured to run on an on-premise system that has access to SCADA system historian. The data is extracted from historian and bulk uploaded on Watson IoT Platform Data Lake. The device data in the data lake is used by Watson IoT Platform Analytic Service for monitoring.

Documentation is broken down into following sections:

- [Overview](#)
- [Deployment](#)
- [Configuration](#)
 - [Connection Configuration](#)
 - [Entity Type Configuration](#)
