

Configure Container

The configuration files are in **/mnt/volume/config** directory. The following configuration files need to be created to configure the container:

- **connection.json**: Contains connection related configuration items to connect to wiotp, data lake and scada historian.
- **<entityType>.json**: Contains entity or device data extracted from SCADA historian table and data lake column mappings and event transformation configurations.

For details on connection and device type configuration items, refer to the following sections:

- [Connection Configuration](#)
- [Entity Type Configuration](#)
